Case Study: Vista Health System

Multiple Locations - Multiple Panels - One Interface for Management & Control

Vista Health System needed an access control system which could be modular and accommodate a number of different areas of the hospital yet remain cost effective and allow a single interface for management and control. **Connect ONE**® paired with the DMP hardware fit perfectly within those requirements. The DMP hardware is cost effective, allows easy implementation with control panels connected to the network wherever required, and/or door controllers directly connected to the network. **Connect ONE**® provided the interface to allow their security staff to control the system securely from any web browser or mobile phone. They can now batch user codes to all the control panels with a couple clicks, send a lockdown command to multiple panels in a single click, and much more.

RMR
$283.00 / month

Equipment List
(5) DMP XR500N Control Panels
DMP 734 & 734N Door Controllers
Access Keypads and Card Readers
USB Proximity Enrollment Reader

About Connect ONE
Connect ONE® is a web-hosted service offering end-user management of their security, access control, video, hvac, and lighting systems that generates recurring monthly revenue, **RMR**, for your company and return on investment, **ROI**, for your customers. Through ONE secure login, this powerful web-hosted service allows for fast and easy management of your customers' locations, systems, and personnel from web-enabled devices.
